Actuarial Consultant (5+ years' experience) - Sydney

Is variety your jam? We are looking for experienced actuarial consultants who are seeking diversity and want to work on a range of projects across our traditional and non-traditional sectors for both corporate and government clients. Why be pigeon holed when you can be free to sink your teeth into projects across an array of business lines including general insurance, injury schemes, social welfare, aviation, marketing, health and forensics.

Part owned by Qantas Loyalty, we are not your typical consultancy offering a dynamic, innovative and collaborative environment with people that are truly passionate about what they do. Our consultants come from actuarial backgrounds, drawing on these skills to support traditional and analytics focussed projects.

We advise and we do – being hands on is part of our DNA.

We are looking for someone who wants to become a part of our posse – to mentor and train junior team members, contribute to business activities, and be excited to innovate and strengthen future business growth.

At Taylor Fry we like to get our hands dirty, so you can expect to work closely with senior stakeholders and contribute to key project decisions. You will need to be a confident operator as you will act as an internal advisor interpreting and analysing complex technical data across various streams of work on both small and large projects.

Exposure to clients is important at every stage of a consultant's career, therefore you can expect to interact with clients regularly and be involved in business development efforts, participating in tenders and proposals.

Providing opportunities that interest and challenge our people is what keeps them here.

We will support your career progression and provide opportunities that meet your interests and development needs. If you want a more focussed role to build your expertise in a particular sector, we can offer that as well. Basically, we can be flexible.

Adding true value for our clients is what drives us.

Our traditional work spans the breadth of projects such as scheme design, statistical pricing and modelling, valuations, financial projection models, and risk analysis and advice. We are a trusted advisor and Appointed Actuary to 20 insurers and assist with everything from capital allocation to reinsurance program design to financial management.

Our analytics capability applies the latest statistics, machine learning and data science research and techniques, for a broad range of projects such as personalised marketing, insurance pricing, resource optimisation, people analytics and other services that provide our clients with insights to improve performance.

Maintaining an open, cohesive culture is paramount.

Our people love rolling up their sleeves to immerse themselves in the technical detail. We foster a culture of high performance yet balance this with a genuine care for employees, nurturing their interests and supporting their growth and development. We believe the learning experience never ends, and have benefits available to support employees with furthering their education or to qualify as an actuary. Taking an active interest in our people and their careers, we promote work practices that support well-being, mental wellness and work/life balance.

About us

We are a leading independent consultancy, providing analytical and actuarial advice to government and business, we develop deep understanding of our clients through building long-term relationships and providing personalised service from highly experienced analysts and actuaries. We are at the forefront of developing innovative and world-class solutions for the actuarial and analytical challenges faced by our clients, solving problems using data.

How to apply

Send your CV along with a cover letter and a copy of your academic transcript to **careers@taylorfry.com.au** to the attention of the HR Manager.

Suitable candidates should possess the following skills and experience:

- Be a qualified or part-qualified Actuary with at least 5 years' experience, either in a consulting or corporate environment

- Advanced statistical and case estimation skills, along with experience in database statistical packages such as SAS, R or SQL.

- Experience in one or more of the firm's core sectors (general insurance, injury schemes, social sector or analytics)

- Exposure to analytics projects advantageous but not a must

- Ability to interpret and analyse complex technical data with high attention to detail

- Some experience leading, training and mentoring junior team members

- As Taylor Fry is a consultancy, it is imperative that candidates are strong communicators who have good interpersonal skills and are confident liaising with and presenting to clients and diverse stakeholder audiences.
