# Consulting – Analytics – Senior Managers and Directors

Our analytics practice offers client-focused solutions to government and corporate clients across a range of business lines including insurance, marketing, health, forensics and aviation. Using the latest statistics, machine learning and data science research and techniques, we help our clients to make strategic decisions, adding true value to their business with measurable results.

## About the opportunity

We are looking for senior consultants with an analytics background for newly created roles that have become available as a result of greater demand for our analytics capability. The opportunity will see you working closely with senior stakeholders and directly with clients on a range of analytics projects. As a senior member of the analytics team, you can expect to support projects such as insurance pricing, personalised marketing, resource optimisation, people analytics and other services that provide our clients with insights to improve performance and profitability.

You will need to be confident with managing various streams of work on large projects, involving end-to-end support as well as assisting with client management. For this reason, you should have experience leading small teams and be confident with managing multiple priorities, as you will provide support with the planning, scoping and directing of projects right through to determining pricing, resourcing and delivering on outcomes.

The position will provide you with extensive exposure to clients. You will work closely with our local and international clients to understand their needs and deliver tailored, commercial solutions. You will also be involved in business development and be encouraged to create valuable relationships with current and new clients.

We value our open, collaborative culture, and are looking for someone who wants to become a part of it – to mentor and train junior team members, contribute to business activities, and be excited to innovate and strengthen future business growth.

## About us

Taylor Fry is a leading independent firm, providing analytical and actuarial advice to government and business. We develop deep understanding of our clients through building long-term relationships and providing personalised service from highly experienced analysts and actuaries. We are at the forefront of developing innovative and world-class solutions for the actuarial and analytical challenges faced by our clients. Solve problems using data.

With offices in Sydney, Melbourne and Wellington, we have a wide reach extending across insurance, injury schemes, social sector, analytics, health and forensics. We are also part owned by Qantas Loyalty.

## About our culture

At Taylor Fry we are passionate about the work we do, being hands on is part of our DNA and our people love rolling up their sleeves to immerse themselves in the technical detail. We foster a culture of high performance yet balance this with a genuine care for employees, nurturing their interests and supporting their growth and development.

We take an active interest in our people and their careers, and promote work practices that support well-being, mental wellness and work/life balance. Having a collaborative and inclusive culture is at our core, and we inspire discussion and teamwork at all levels, challenging ideas that allow us to continually improve.

## Skills and experience

» Experience in an analytics-focussed role.

» Experience working in a consulting environment with direct exposure to clients.

» Experience leading projects or streams of work on large projects, some experience with leading people and an enthusiasm for supervising and training junior team members.

» Experience in scripting languages such as SAS, R, Python and other relevant languages.

» Experience in predictive modelling, statistics and/or machine learning.

» Ability to interpret and analyse complex technical data with high attention to detail.

» As Taylor Fry is a consultancy, it is imperative that candidates are strong communicators who have good interpersonal skills and are confident liaising with and presenting to clients and diverse stakeholder audiences.

## How to apply

To apply, please send your CV along with a cover letter and a copy of your academic transcript to recruitment@taylorfry.com.au to the attention of the HR Manager.
